

JUNE 2016

Valleywood Cliffview Court, Meadow Plot 2 Installation by TRCA Staff

TRCA staff installed an additional pollinator meadow plot at Valleywood in Caledon as part of a long-term restoration project. With increasing public awareness of pollinator species decline, TRCA is implementing these areas to assist with habitat needs.

Staff prep the area and line with geotextile fabric to control invasive plant species. The plot is bordered with cedar logs, soil medium is distributed in the plot and a layer of geotextile fabric is laid on top to prevent invasive vegetation seed from establishing. Local community residents attend the site to plant native wildflowers and install habitat structures to enhance the area.

These family friendly activities educate residents on the importance of pollinators and bring a heightened awareness of a healthy diverse greenspace within an urban setting.
