

# NOTICE OF PROJECT COMPLETION

## AJAX SHORELINE EROSION MITIGATION PROJECT

Toronto and Region Conservation Authority (TRCA) has completed the planning and design process to undertake the Ajax Shoreline Erosion Mitigation Project located in Ajax, Ontario. This project has been planned in accordance with Conservation Ontario's *Class Environmental Assessment for Remedial Flood and Erosion Control Projects* (Class EA), the approved process for this type of undertaking under the *Environmental Assessment Act*.

Based on the outcome of the Class EA process, TRCA is intending to proceed with implementing a combination of offshore breakwaters, cobble/boulder beaches, and shoreline erosion monitoring to ensure continued protection of the shoreline. The shoreline has been divided into twelve sections called reaches and each reach was assigned a priority and a proposed solution. The priority levels and proposed solutions were outlined in the Environmental Study Report, and implementation timelines will be based on available funding.

A Project Plan was prepared to document the decision-making process exercised when selecting the preferred alternative. The Project Plan was filed for a thirty (30) day public review period. TRCA intends to finalize the detailed designs of the preferred alternatives and obtain the necessary approvals to proceed with the implementation of remedial works based on the priority identified in the Environmental Study Report and to the extent allowed by available funding from the Town of Ajax.

We thank you for your interest and participation in the planning of this project. If you have any additional inquiries or are interested in receiving more information, please contact:
